

Project Manager (m/f)

The goal of Vakzine Projekt Management GmbH (VPM) is to promote innovative ideas and bring projects to life. With this approach VPM has developed into a successful biotechnology company which is internationally recognized.

Currently, VPM offers the opportunity to become part of its team of project managers involved in pharmaceutical development. This means being part of a company of team players and working closely together with experts from all areas of the development chain (research, non-clinical development, manufacture, regulatory, clinical development, patent law, marketing and business development) to successfully move our projects forward to market.

Since 2003, VPM has been active in developing promising biopharmaceutical candidates from academic research to successful clinical proof of concept. Several products, ranging from small molecules, recombinant proteins up to gene-modified live vaccines and other ATMPs, have successfully been brought into clinical phases I and II. Based on this in-depth experience, the VPM team is a reliable partner for tailor-made consultancy and services along the complete pharmaceutical development chain.

Are you looking for new challenges? Do you like structural and analytical thinking and planning? Do you want to take responsibility within a project? VPM is offering you the chance to achieve all of this in an ambitious company.
